

## **Communicable Disease Guidelines for Schools and Child Care Facilities**

## **EASTERN ONTARIO HEALTH UNIT**

These guidelines are intended to provide principals, teachers, directors of child care facilities and other professionals with guidance on communicable disease control.

Any child who is too ill to participate fully in regular activities should be cared for at home.

Revised June 2024

## **DISEASE INDEX**

**Amebiasis** Giardiasis (Beaver Fever) Respiratory Syncytial Virus (RSV) Bite (Human) Hand, Foot, and Mouth Disease Ringworm (Tinea) Bite (Animal) or exposure to a potentially rabid **Hepatitis A** Roseola animal (Rabies) **Hepatitis B** Rubella **Beaver Fever Hepatitis C** Salmonella Campylobacter **HIV/AIDS** Salmonella Paratyphi (Paratyphoid Fever) Candidiasis (Thrush, Diaper Rash) **Impetigo** Salmonella Typhi (Typhoid fever) **Chickenpox (Varicella)** Influenza **Scabies Cold Sores** Lice (Pediculosis) **Scarlet Fever Conjunctivitis-Bacterial (Pink Eye)** Shigella **Measles Conjunctivitis-Viral (Pink Eye) Shingles (Herpes Zoster)** Meningitis (any kind) COVID-19 **Molluscum Contagiosum (Non-Plantar Warts)** Streptococcus: Group A Strep (Strep Throat / Coxsackie Virus (Hand, Foot, and Mouth Disease) **Scarlet Fever**) **Mononucleosis** Cryptosporidium Streptococcus: Invasive Group A (Necrotizing Fasciitis / Toxic Shock Syndrome) **Mumps** Diarrhea **Tuberculosis (TB)** Norovirus (Norwalk-like virus) Escherichia Coli 0.157 (E. Coli 0.157) (Escherichia Coli) Vomiting **Pertussis (Whooping Cough)** Fifth Disease (Parvovirus B19) **Whooping Cough** Pink Eye Gastroenteritis: Single case of unknown cause **Yersinia Pinworms** 

**Poison Ivy and Wild Parsnip** 

**Respiratory Outbreak** 

**Gastroenteritis: Outbreak** 

German Measles (Rubella)

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
Amebiasis	Cause: Parasite.	Fecal-oral route.	Variable, from a few	During the period that	Until 24 hours after	Report within 1
	<ul> <li>Abdominal distention and cramps, fever, chills, diarrhea, or constipation.</li> </ul>	<ul> <li>Food and water contaminated by infected food handler or sewage.</li> </ul>	days to several months.  • Average 2 to 4 weeks.	cysts are passed, which may continue for years.	diarrhea resolves or until 48 hours after completion of antibiotic treatment.	business day to 613-933-1375 or 1 800 267-7120.
	<ul> <li>May be symptom-free.</li> </ul>					
Bite (Human)	If the skin is broken, there may be a risk of transmission of hepatitis B, hepatitis C, or HIV from an infected	Contact of contaminated blood with a break in the skin or blood inside of the mouth.	Depends on the disease.	Depends on the disease.	Not required.	Not required unless either person is known to be infected with hepatitis B, hepatitis C or HIV.
	person.					• If so, report immediately to 613-933-1375 or 1 800 267-7120.
Bite (Animal) or exposure to a potentially rabid animal (Rabies)	<ul> <li>There is a risk of rabies from the bites of bats, cats, dogs, ferrets, groundhogs, muskrats, raccoons, skunks, and other wild mammals.</li> </ul>	Animal saliva introduced by a bite or scratch.	Rabies:  • Usually 3 to 8 weeks.  • Rarely, as short as 9 days or as long as 7 years.	Rabies: • Rabid animals are infectious from the time the virus reaches the salivary glands and up until death.	Not required.	• Report immediately to 613-933-1375 or 1 800 267-7120 to begin rabies immunization, if needed, and/or to quarantine the biting
	<ul> <li>Bites of gerbils, hamsters, mice, moles, rabbits, and squirrels do not have to be reported unless the animal's behaviour was very abnormal.</li> </ul>			Death usually occurs within 1 week of onset of clinical signs.		animal, if available.
	<ul> <li>Bites and scratches from animals may also result in infection, especially for young children, if not treated promptly.</li> </ul>					
	<ul> <li>Young children are more at risk of injury to their face and neck.</li> </ul>					
Beaver Fever	See Giardiasis.					

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
Campylobacter	<ul> <li>Cause: Bacteria.</li> <li>Diarrhea, abdominal pain, fever, nausea, and vomiting.</li> </ul>	<ul> <li>Undercooked meats (all kinds), especially chicken.</li> <li>Unpasteurized milk.</li> </ul>	<ul><li>1 to 10 days.</li><li>Average 2 to 5 days.</li></ul>	Several days to several weeks, as long as bacteria is excreted in feces. Without	24 hours or 48 hours after completion of antibiotics or	• Report within 1 business day to 613-933-1375 or 1 800 267-7120.
	Sometimes bloody stools.	<ul> <li>Food and water contaminated by infected food handler or sewage.</li> </ul>		treatment, bacteria may be excreted for 2 to 7 weeks.	antidiarrheal medications.	
		<ul> <li>Fecal-oral route.</li> </ul>				
		<ul> <li>Contact with infected animals (especially pets and farm animals).</li> </ul>				
Candidiasis (Thrush, Diaper Rash)	<ul> <li>Cause: Fungus.</li> <li>Thrush: Thin white layer on tongue and inside of cheeks. May cause difficulty with feeding.</li> </ul>	<ul> <li>Person-to-person by direct contact with the mouth, skin or bodily secretions containing the fungus.</li> </ul>	<ul><li> Variable.</li><li> 2 to 5 days for thrush in infants.</li></ul>	<ul> <li>While lesions are present.</li> <li>Avoid sharing bottle nipples and soothers between children.</li> </ul>	Not required.	Not required.     For more information, visit caringforkids.cps.ca
	Diaper rash or other skin rash: Well demarcated, red rash with white flaky border, usually in skin folds. Painful when comes in contact with urine.					
Chickenpox	Cause: Virus.	Person-to-person by	• 10 to 21 days;	Usually 1 to 2 days before onset of rash, until all blisters are crusted (usually about 5 days after the onset of rash).	• No exclusion, children can return with rash if fever-free and able to participate in regular programs. Contact with immunocompromised individuals, pregnant persons, particularly those in the third trimester, or newborns should be avoided. Children should be seen by a physician as soon as possible if: 1) fever (>38.3°C) lasts for more than 3 days or recurs, 2) redness, swelling, and severe pain develop around a blister.	<ul> <li>Report number of cases and age of children on a weekly basis by mail or fax to 613-933-7930.</li> <li>Staff, parents, and</li> </ul>
(Varicella)	<ul> <li>Fever, blister-like rash in successive crops.</li> <li>"Spots" appear first on body, face, and scalp, then arms and legs.</li> </ul>	direct contact with virus through droplet or airborne spread of blister fluid or respiratory secretions.	•			
	Scabs appear after the blister stage.	<ul> <li>Indirectly through freshly contaminated objects and surfaces.</li> </ul>				guardians should be notified of chickenpox in a classroom, particularly immunocompromised children and pregnant persons.

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
Cold Sores	<ul> <li>Cause: Virus.</li> <li>Small blisters appear and then burst to form a crust.</li> <li>Sores are usually around the mouth, but can be around the nose and eyes.</li> <li>With the first infection, sores may be accompanied by fever, flu-like illness, and painful irritation. Reactivation of infection is common.</li> </ul>	<ul> <li>Person-to-person by direct contact with saliva.</li> <li>Note: Handwashing is important in preventing transmission.</li> </ul>	• 2 to 12 days.	apparent	Not required. If child has severe sores with fever and/or excessive drooling, consider exclusion until fever-free and able to participate fully in regular activities without excessive drool.	Not required.     For more information, visit aboutkidshealth.ca.
Conjunctivitis- Bacterial (Pink Eye)	<ul> <li>Cause: Bacteria.</li> <li>Purulent conjunctivitis: Pink or red conjunctiva (the white of the eye) with white or yellow discharge (pus).</li> <li>Sometimes fever.</li> </ul>	<ul> <li>Person-to-person with direct or indirect contact with eye secretions.</li> <li>Healthy eye coming in contact with secretions from affected eye.</li> <li>Frequent handwashing</li> </ul>	• 24 to 72 hours.	For duration of infection or until 24 hours of effective antibiotic treatment.	For bacterial or possible bacterial, exclude until treated with antibiotic drops or ointment for 24 hours.	<ul> <li>Not required.</li> <li>For more information, visit caringforkids.cps.ca.</li> </ul>
	Sometimes rever.	<ul> <li>Frequent nandwasning is important for control of spread.</li> </ul>				
Conjunctivitis-Viral (Pink Eye)	<ul> <li>Non-purulent conjunctivitis: Pink conjunctiva with a clear, watery eye discharge and no fever, eye pain or eyelid redness.</li> <li>May be accompanied by a cold.</li> </ul>	Person-to-person by direct or indirect contact with eye secretions.	12 hours to 12 days.	infection.	<ul> <li>Not required, if no eye discharge.</li> <li>To consider if strict hand hygiene cannot be ensured. Otherwise, child can return upon approval by healthcare provider.</li> </ul>	<ul> <li>Not required.</li> <li>For more information, visit caringforkids.cps.ca.</li> </ul>
COVID-19	• Visit <u>EOHU.ca</u> website.					

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
Coxsackie Virus (Hand, Foot, and Mouth Disease)	<ul> <li>Cause: Virus.</li> <li>Acute self-limited viral infection.</li> <li>Sudden onset of fever, sore throat.</li> <li>Rash occurs commonly on the palms of the hands, the fingers, inside the mouth and on the soles of the feet.</li> <li>Acute illness usually occurs in children, particularly in the summer months.</li> </ul>	<ul> <li>Person-to-person by direct contact with fluid from sores, respiratory secretions, and fecaloral route.</li> <li>Although most common in young children, asymptomatic adults can also spread infection.</li> </ul>	Usually 3 to 5 days.	<ul> <li>Most infectious during the first week of illness while experiencing symptoms.</li> <li>Transmission via stools and throat secretions may persist for several weeks.</li> <li>Hand hygiene is important.</li> </ul>	Not required.	Not required.     For more information, visit caringforkids.cps.ca.
Cryptosporidium	<ul> <li>Cause: Parasite.</li> <li>Frequent, non-bloody watery diarrhea, abdominal cramps, fatigue, vomiting, anorexia, and weight loss.</li> <li>Fever and vomiting relatively common among children.</li> <li>May be symptom-free.</li> </ul>	Fecal-oral, including person-to-person, animal-to-person, waterborne and foodborne transmission.	<ul><li>1 to 12 days.</li><li>Average about 7 days.</li></ul>	From onset of symptoms, and for several weeks after symptoms resolve.	<ul> <li>Until 24 hours after stools are formed.</li> <li>Cases are not to use recreational water for 2 weeks after symptoms resolve.</li> </ul>	• Report within 1 business day to 613-933-1375 or 1 800 267-7120.
Diarrhea	See Gastroenteritis.					
Escherichia Coli 0.157 (E. Coli 0.157) (Escherichia Coli)	<ul> <li>Cause: Bacteria.</li> <li>Severe abdominal cramps.</li> <li>Watery or bloody diarrhea, fever, nausea, vomiting.</li> <li>Most individuals recover without residual effects, however complications such as Hemolytic Uremic Syndrome (HUS), a serious health condition, may occur in a small percentage of individuals.</li> </ul>	Fecal-oral route.     Food or water sources such as undercooked meat, non-pasteurized dairy products or apple cider, unwashed raw fruits and vegetables, contaminated water.	<ul> <li>2 to 10 days.</li> <li>Average 3 to 4 days.</li> <li>HUS typically develops 7 days (up to 3 weeks) after onset of diarrhea.</li> </ul>	<ul> <li>While person has symptoms, usually 1 to 3 weeks.</li> <li>Children tend to be infectious longer than adults.</li> </ul>	Until stools are formed.     Child Care Centres:     Until 2 negative stool cultures, at least 24 hours apart.     Until 48 hours after the completion of antibiotics and/or antidiarrheal medications.	• Report immediately to 613-933-1375 or 1 800 267-7120.

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
Fifth Disease (Parvovirus B19)	<ul> <li>Cause: Virus.</li> <li>Illness is mild, usually with no fever.</li> <li>Initial "slapped cheek" rash.</li> <li>Followed by lacelike rash (1 to 4 days later, on the arms and body; can fade but may recur and last for 1 to 3 weeks).</li> </ul>	<ul> <li>Person-to-person by respiratory secretions.</li> <li>Mother to fetus.</li> </ul>	4 to 14 days but can be as long as 21 days.	Greatest before onset of rash, and probably not communicable after onset of rash.	<ul> <li>Not required since no longer infectious after rash appears. However, children who are febrile should be excluded until fever-free and able to participate in regular programs.</li> <li>Pregnant women, children with sickle cell and other forms of chronic anemia should be advised to consult their physician.</li> </ul>	Not required.     For more information, visit caringforkids.cps.ca.
Gastroenteritis: Single case of unknown cause	<ul> <li>Cause: Bacteria, virus, parasite.</li> <li>Vomiting, diarrhea, loss of appetite and or abdominal pain with or without fever.</li> </ul>	<ul> <li>Depends on cause.</li> <li>Usually fecal-oral route or through contaminated food or water.</li> </ul>	Depends on cause.	Depends on cause.	Exclude until minimum of 48 hours symptom-free or as directed by the school or childcare setting.      Child Care Centres:     Repeat stool testing is required if the diagnosis is Salmonella typhi or paratyphi, E.Coli 0.157 or Shigella.	<ul> <li>Not required unless part of an outbreak.</li> <li>Exception: bloody diarrhea should always be reported immediately.</li> <li>See Gastroenteritis: Outbreak</li> </ul>
Gastroenteritis: Outbreak	<ul> <li>Cause: Bacteria, virus, parasite.</li> <li>Vomiting, diarrhea, abdominal pain, headache, fever.</li> </ul>	Depends on cause.	Depends on cause.	Depends on cause.	<ul> <li>Depends on cause, number of cases and source of infection.</li> <li>Outbreaks must be discussed with the EOHU.</li> <li>During an outbreak, persons with vomiting or diarrhea should be excluded until 48 hours symptom-free, before returning to work or childcare.</li> </ul>	Report immediately to 613-933-1375 or 1 800 267-7120. Child Care Centres: An outbreak exists when there are 3 or more children and/or staff ill with gastroenteritis within a 4-day period.  School: >10% absenteeism due to similar symptoms in a school on the same day.

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
German Measles (Rubella)	<ul> <li>Cause: Virus.</li> <li>Mild fever, enlarged neck nodes, headache, tiredness, runny nose, malaise, fine pale red rash spreading from behind the ears to the face, then downward.</li> <li>Often difficult to diagnose.</li> </ul>	<ul> <li>Person-to-person by respiratory secretions.</li> <li>Highly contagious.</li> </ul>	• From 14 to 21 days.	For about 1 week before, until 7 days after the onset of the rash.	<ul> <li>For 7 days after the onset of rash.</li> <li>Susceptible individuals exposed to a confirmed case must be excluded.</li> <li>Consult the EOHU.</li> </ul>	• Report immediately to 613-933-1375 or 1 800 267-7120.
Giardiasis (Beaver Fever)	<ul> <li>Cause: Parasite.</li> <li>Acute or chronic diarrhea (stools may also be pale and/or greasy, abdominal cramps, bloating, dehydration, weight loss).</li> <li>May be symptom-free.</li> </ul>	<ul> <li>Fecal-oral route.</li> <li>Water and food contaminated by infected food handler or sewage.</li> <li>Raw or undercooked seafood and shellfish.</li> <li>Lakes and river water.</li> <li>May also be spread by certain sexual activities involving contact with feces.</li> </ul>	<ul><li> 3 to 25 days.</li><li> Average 7 to 10 days.</li></ul>	As long as present in the stool, often months or until treated.	<ul> <li>Exclude all symptomatic individuals (children and staff), including food handlers until 24 hours after stools are formed or 48 hours after stopping antidiarrheal medication.</li> <li>Cases are not to use recreational water for 2 weeks after symptoms resolve.</li> </ul>	• Report within 1 working day to 613-933-1375 or 1 800 267-7120.
Hand, Foot, and Mouth Disease	See Coxsackie Virus.					
Hepatitis A	<ul> <li>Cause: Virus.</li> <li>Fever, tiredness, jaundice, abdominal discomfort, dark foulsmelling urine, clay-coloured stools.</li> <li>May be symptom-free.</li> </ul>	Fecal-oral route, either by direct contact with an infected person or indirectly through ingestion of contaminated water or food. May also be spread by certain sexual activities involving contact with feces.	<ul><li>15 to 50 days.</li><li>Average 28 to 30 days.</li></ul>	2 weeks before to 1 week after the onset of jaundice (yellowing of skin).	Exclude until 14 days after the onset of symptoms or 7 days after the onset of jaundice, whichever is sooner.	• Report immediately to 613-933-1375 or 1 800 267-7120.
Hepatitis B	<ul> <li>Cause: Virus.</li> <li>Loss of appetite, fatigue, vague abdominal discomfort, joint pain, fever, and jaundice (yellowing of skin and/or eyes).</li> <li>May be symptom-free.</li> </ul>	Blood and bloody fluids, semen, vaginal fluids, and saliva, with non- intact skin or mucus membranes (eye, nose, mouth).	<ul><li>45 to 180 days.</li><li>Average 60 to 90 days.</li></ul>	<ul> <li>From weeks before onset to months or years after recovery from illness.</li> <li>May become carriers and be contagious for life.</li> </ul>	<ul> <li>Not required.</li> <li>Child Care Centres:</li> <li>Special circumstances may apply depending on child's behaviour.</li> <li>Cases must be discussed with the EOHU.</li> </ul>	<ul> <li>Report within 1 working day to 613-933-1375 or 1 800 267-7120.</li> </ul>

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
Hepatitis C	<ul> <li>Cause: Virus.</li> <li>Most cases are usually asymptomatic or have mild illness; vague abdominal discomfort, nausea, vomiting, fatigue, and jaundice (yellowing of skin and/or eyes).</li> </ul>	Through contact with blood or contaminated items such as used needle, unsterile tattooing or piercing equipment.	<ul><li> 2 weeks to 6 months.</li><li> Average 6 to 9 weeks.</li></ul>	<ul> <li>From one or more weeks before onset of first symptoms. May persist indefinitely among persons with chronic infection.</li> <li>Communicability can be ended with treatment.</li> </ul>	Child Care Centres:  • As above.	<ul> <li>Report within 1 working day to 613-933-1375 or 1 800 267-7120.</li> </ul>
HIV/AIDS	<ul> <li>Cause: Human immunodeficiency virus.</li> <li>Many will develop a short-term flu-like illness several weeks to months after infection.</li> <li>After several years, damage to the immune and other systems lead to severe infections and death.</li> </ul>	<ul> <li>Through contact with blood (needle sharing among injection drug users, unsterile tattooing or body piercing).</li> <li>Unprotected sexual intercourse or from mother to fetus.</li> <li>Person to person by direct contact with body fluids (blood, breast milk, sexual fluids).</li> </ul>	Generally 4 to 12 weeks until HIV blood test is positive.	<ul> <li>Generally begins early after onset of infection and extends throughout life.</li> <li>Communicability decreased with use of Antiretroviral therapy (ART).</li> </ul>	·	<ul> <li>Report within 1 working day to 613-933-1375 or 1 800 267-7120.</li> </ul>
Impetigo	<ul> <li>Cause: Bacteria.</li> <li>Skin infection caused by streptococcus / staphylococcus bacteria.</li> <li>Usually appears on face or exposed skin as a rash with cluster of red bumps/blisters.</li> <li>May ooze or be crusted.</li> </ul>	<ul><li>particularly if scratched.</li><li>Hand hygiene is</li></ul>	<ul><li>Variable.</li><li>Average 4 to 10 days.</li></ul>	<ul> <li>From onset of rash until 24 hours of treatment with oral or topical antibiotic.</li> <li>Typically until blisters have crusted over.</li> </ul>	completely scabbed	<ul> <li>Not required.</li> <li>For more information, visit caringforkids.cps.ca.</li> </ul>
Influenza	<ul> <li>Cause: Influenza A or B virus.</li> <li>Infection of the airways, leading to fever, headache, muscle soreness, runny nose, sore throat, and cough.</li> <li>Children may also have nausea, vomiting and diarrhea.</li> </ul>	Person-to-person by direct contact with respiratory secretions or indirect contact with contaminated surfaces or objects.	• 1 to 3 days.	<ul> <li>24 hours before onset of symptoms.</li> <li>Up to 7 days in young children.</li> </ul>	the onset of symptoms OR until fever-free and	<ul> <li>Report within 1 working day to 613-933-1375 or 1 800 267-7120.</li> <li>Report outbreaks immediately.</li> </ul>

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
Lice (Pediculosis)	Colonization of the hair and skin by a parasitic insect. Head lice feed on human blood. Itching from lice bites is common. Adult lice or eggs (nits) can be seen with the naked eye, often behind the ears and near the nape of the neck.	Head lice are generally spread through direct head-to-head contact with an infested person. Transmission by sharing infested belongings such as bedding, clothing or headwear may also occur.	Lice undergo a life cycle of 3 stages (egg, nymph, and adult lice) which ranges from days to months.	Until treatment has been completed.	Not required.	Not required.     For more information, visit caringforkids.cps.ca.
Measles	Cause: Virus.	Person-to-person by  direct contact or by	• 7 to 21 days.	4 days before the fever     and sough until 4 days		• Report immediately to 613-933-1375 or 1 800 267-7120.
	<ul> <li>Fever, runny nose, cough, drowsiness, irritability, and red eyes.</li> <li>Small white spots appear on the inside of the mouth and throat.</li> <li>Then, 3 to 7 days after initial symptoms, a red blotchy rash appears on the face and progresses down the body.</li> </ul>	airborne dropiets.	Average 10 days.	and cough until 4 days after the onset of rash.	of rash.	
Meningitis (any kind)	<ul> <li>Cause: Bacteria or virus.</li> </ul>	Varies depending on cause of meningitis.	Varies depending on cause of meningitis.	Varies depending on cause of meningitis.	All cases must be discussed with the	• Report immediately to 613-933-1375 or 1 800
	Young children:  • May show a cluster of symptoms such as irritability, rash, poor feeding, vomiting, fever, and excessive highpitched crying.	Often is person-to- person by respiratory secretions (droplets).		-	EOHU.	267-7120.
	<ul> <li>Older children and adults:</li> <li>May experience violent persistent headache, vomiting, and neck rigidity.</li> </ul>					

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
Molluscum	Cause: Virus.	Person-to-person by	7 days to 6 months.	Unknown, but probably as long as warts	Not required, however,	Not required.
Contagiosum (Non- Plantar Warts)	• Smooth, often shiny, pinkish-white bumps with sunken centre, most often on face, trunk, or limbs of children. Can be found on genitalia. May cause itchiness.	direct skin-to-skin contact or indirect contact, such as sharing clothes or towels.		persist.	lesions or warts should be covered upon return to child care centre/school.	For more information, visit caringforkids.cps.ca.
	Cause: Epstein Barr virus.	Person-to-person by oral secretions via	• 4 to 6 weeks.	Up to 1 year or more.	Not required.	Not required.
	<ul> <li>Fever, sore throat, swelling of glands around neck area, fatigue.</li> </ul>	saliva, or indirectly through surfaces and items (such as toys) contaminated with saliva.				
Mumps	Cause: Virus.	Person-to-person by respiratory secretions or saliva.	• 12 to 25 days.	ofter exemptoms	,	Report immediately to
	<ul> <li>Fever, swelling and tenderness of salivary glands, slightly above the angle of the jaw on one or both sides.</li> </ul>		Average 16 to 18 days.		<ul><li>onset of swelling.</li><li>Discuss with the EOHU.</li></ul>	613-933-1375 or 1 800 267-7120.
Norovirus	Cause: Virus.	Fecal-oral route.	• 4 to 72 hours.	During acute stage of	Until 48 hours after last	Not required unless
(Norwalk-like virus)	<ul> <li>Acute onset of nausea, vomiting (especially in</li> </ul>	<ul> <li>Contact with vomit/feces.</li> </ul>	<ul> <li>Average 24 to 48 hours.</li> </ul>	illness and up to 48 hours after last episode of vomiting or diarrhea.	episode of vomiting or diarrhea.	<ul><li>part of an outbreak.</li><li>See Gastroenteritis:</li></ul>
	children), abdominal cramps and/or diarrhea (especially in adults).	<ul> <li>Contaminated water, ice, or food (clams, oysters, salad</li> </ul>		or vorniting or diarrilea.		<u>Outbreak</u>
	<ul> <li>May have headache, fever, chills, and muscle pain.</li> </ul>	ingredients, fruit and other uncooked foods contaminated by infected food handler).

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
Shigella	<ul> <li>Cause: Bacteria.</li> <li>Watery diarrhea, fever, nausea, vomiting, abdominal cramps.</li> <li>May be symptom-free.</li> <li>Stool may contain mucous and/or blood.</li> </ul>	Primarily spread person to person through fecaloral route, either by direct contact with an infected person or indirect contact with contaminated surfaces, water or food handled by an infected person. May also be spread by certain sexual activities involving contact with feces. Poor personal hygiene also increases the risk of transmission as the only significant reservoir for shigella is humans.	<ul><li>12 hours to 7 days.</li><li>Average 1 to 3 days.</li></ul>	<ul> <li>From onset of symptoms until bacteria is no longer in stools (about 4 weeks).</li> <li>Use of antibiotics may shorten this timeframe.</li> </ul>	Child Care Centres:  • Exclude symptomatic cases who are food handlers, or daycare attendees until the provision of a negative stool sample or rectal swab collected at least 24 hours after cessation of symptoms OR 48 hours after completion of antibiotic therapy used.	• Report immediately to 613-933-1375 or 1 800 267-7120.
Shingles	Cause: Virus.	It is only possible to get	Average 14 to 16 days.	Until blisters are crusted over.	Not required.	Not required.
(Herpes Zoster)	<ul> <li>Reactivation of latent varicella (chickenpox) infection in the nerve endings.</li> </ul>	chickenpox from someone with shingles through direct contact with vesicle fluid of the patient with shingles.				For more information, visit caringforkids.cps.ca.
	<ul> <li>Blister-like lesions may appear in irregular crops along nerve pathways.</li> </ul>					
	<ul> <li>Accompanied by pain localized to the area.</li> </ul>					
	<ul> <li>Pain may persist for prolonged periods.</li> </ul>					

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
Streptococcus:	Cause: Bacteria.	,	• 1 to 3 days.	From onset of symptoms until 24 hours after beginning of antibiotic treatment.	Until 24 hours after treatment began.	<ul> <li>Not required.</li> </ul>
Group A Strep (Strep Throat / Scarlet Fever)	Strep throat: • Very sore and red throat, fever, swollen					For more information on strep throat and scarlet fever, visit caringforkids.cps.ca.
	and tender lymph nodes.			<ul> <li>10 to 21 days if untreated.</li> </ul>		
	Scarlet fever:  • High fever, vomiting,     "sandpaper" skin rash,     "strawberry tongue",     red cheeks and     whiteness around     mouth.					
	<ul> <li>During convalescence, skin on hands and feet may peel.</li> </ul>					
Streptococcus:	Cause: Bacteria.	Direct or indirect		From onset of symptoms until 24 hours after beginning of antibiotic treatment.	Until 24 hours after	• Report immediately to 613-933-1375 or 1 800 267-7120.
Invasive Group A (Necrotizing Fasciitis / Toxic Shock Syndrome)	Necrotizing Fasciitis: • Fever, localized redness, swelling, blister formation and intense pain.	d ::			<ul> <li>treatment began.</li> <li>Child is likely to be hospitalized.</li> </ul>	
	<ul> <li>Redness spreads very quickly.</li> </ul>					
	<ul> <li>Can arise from infected chickenpox lesions.</li> </ul>					
	<ul> <li>Toxic Shock Syndrome:</li> <li>Sudden onset of high fever, vomiting, diarrhea, rash, muscle pains, and shock.</li> </ul>					
	Can be fatal.					

DISEASE	CAUSE/SYMPTOMS	TRANSMISSION	INCUBATION	PERIOD OF COMMUNICABILITY	EXCLUSION	REPORTING REQUIREMENTS
Tuberculosis (TB)	<ul> <li>Cause: Mycobacterium tuberculosis.</li> <li>In the lungs:</li> <li>Cough producing sputum, lasting over 3 weeks.</li> </ul>	lungs: Person to person by airborne droplets. If TB disease is outside of the lungs: Not infectious.	tuberculosis disease.	• Varies	Each case to be discussed with the EOHU.	• Report within 1 working day to 613-933-1375 or 1 800 267-7120.
	<ul> <li>Loss of weight, fever, night sweats, tiredness.</li> </ul>					
	Outside of the lungs:  • Varies depending on where the disease is located.					
	<ul> <li>Laboratory tests are required to identify if tuberculosis is present.</li> </ul>					
Vomiting	<ul> <li><u>See Gastroenteritis</u> (single case).</li> </ul>					
Whooping Cough	• See Pertussis.					
Yersinia	Cause: Bacteria.	Fecal-oral route.	• 3 to 7 days.	Fecal shedding occurs as long as symptoms persist, usually 2 to 3 weeks. If untreated, persons may shed 2 to 3 months.	Exclude all cases until	<ul> <li>Report within 1 working day to 613-933-1375 or 1 800 267-7120.</li> </ul>
	<ul> <li>Watery diarrhea, fever, headache.</li> </ul>	Direct contact with infected people or animals (such as puppies or kittens) or indirect contact with contaminated food and water. Raw pork and pork products are known sources of infection.	Average under 11 days.		24 hours after diarrhea resolves, or 48 hours after completion of	
	Stool may contain blood and/or mucus.				antibiotic therapy or antidiarrheal medications.
